Problem Statement

Students face a learning curve as they learn more skills and techniques to adapt to advanced technologies.

Causes

- Missing a lesson or two
- Students don't ask questions while confused
- Students think they understand but don't
- Teachers go at their own pace leaving the class behind

Effect

- Others causing others to fall deeper into the hole
- The blind leading the blind
- Starts tearing away at previously learned lessons
- False sense for security

Prevent

- Try to teach others what you have learned
- Make sure to review after every class
- Do practice problems
- Be sure to ask questions

Spread

- Explain things that you have no problem understanding
- Teach others
- Give others ideas on what to do (Don't spell out the answer)
- Make sure to help everyone out

Reasoning

- If someone is wrong and tecahing another it makes both of them wrong
- If someone thinks they are right they'll be more eager to teach it to another
- Both people not knowing what is right but one is more confident
- Mixing up lessons and notes with gibberish harms the previous learned material
