

Website Name:

- Mizuki Labs (beautiful moon)

Description:

- I plan on making the website in where I can add anything Japanese(lots of anime) to it. I really want to add a anime recommendation generator so that if the user want to find a good anime to watch under the beautiful moon they can. I feel as if anime is a type of art that some people enjoy more than others. To me anime's aren't just hollow or flashy just to catch the users attention they are packed with life lessons. I have learned and shared many things because of anime. It's more than just a regular degular show to me and I feel like others should be able to see it that way too.

Pages:

- Home (featured recs and quick intro)
- Anime Finder (helps users find anime's based on taste, mood, length genre)
- Journal (expanded reactions on shows, food, other things)
- Watchlist (shows my watchlist, plus notes on finished shows)
- Mizuki Community (community votes on what I will watch, can recommend things and share their favorites)
- About (Shows my platforms and lets users know my taste and other things)
